

I respectfully urge the FCC to reject NAB's petition 04-160. I listen often to satellite radio and I enjoy it immensely! The tonal quality is far superior to AM and even to FM at times. The range of programming is incredible and far exceeds what is available to me locally.

I particularly appreciate traffic and weather capabilities for different markets and look forward to more such services being available to me as it helps a great deal when driving to one of those cities and knowing ahead of time if there are traffic problems that I can circumvent. Once I'm stuck in a traffic jam, it's too late.

NAB should be more concerned about meeting their member's customer's needs; not about getting the Government to run their interference.
